Health Education England

Polypharmacy Action Learning Sets

Identifying the barriers that prevent us from stopping inappropriate medicines

What are the risks of polypharmacy for our ageing population?

How can GP Practices and Primary Care Networks address Polypharmacy

What are the cognitive barriers to stopping medicines safely?

What is shared decisionmaking and how can it help?

Why are high risk medicines particularly problematic in older patients?

Sessions facilitated by a local NICE associate and local geriatricians

Developed primarily for GPs, these Action Learning Sets (ALS) are based on work undertaken in Yorkshire and Humber AHSN. They aim to help GPs understand the complex issues surrounding stopping inappropriate medicines safely and will also help Primary Care Networks deliver the Medicines Optimisation elements of the new GP contract.

Delegates are required to attend all 3 sessions. One in five places are also available for Non-Medical Prescribers (NMPs)

The sessions

The three half day sessions are spread over 2 months.

Session 1: Polypharmacy – the scale, impact and challenges around stopping medicines safely. We will define inappropriate medicines and look at the patient perspective.

Session 2: What tools are available to help? We will explore shared decision making, the evidence and tools to help conduct high quality medication reviews including high risk medicines e-learning.

Session 3: Workshop and facilitated discussions to share experience of medication reviews and consolidate learning.

Cohort 1: Wednesday 4th March morning; Wednesday 8th April morning; Wednesday 6th May morning (Password: Polypharmacy1)
